

Documentation for test_payment_declined

How to run:

- Clone repository from https://github.com/ewamiezejewska71/test_declined_payment1
- Install python3, Chrome, Selenium, Webdriver Manager and xmlrunner
- After executing test, test result is saved in /results directory.

Test was performed using PageObjectPattern. Class TestTemplate was added in case we want to add new test suites. All locators are in locators.py - if any locator on site changes, it can be simply edited in this file. Same for test user data (file test_user.py).

Dates of flights and number of seats weren't set statically; test chooses first available dates and seats, so test can be re-used anytime without need to change these parameters in test.
